

**AMENDMENTS TO THE CLAIMS**

The following is a complete, marked up listing of revised claims with a status identifier in parentheses, underlined text indicating insertions, and strikethrough and/or double-bracketed text indicating deletions.

1. (Currently Amended) A method for determining a degree of compliance with a performance specification assigned to a medical working practice, the method comprising:

recording and storing, by a data-processing device, data correlated with the medical working practice ~~in a data-processing device~~;

storing, by a test system, test criteria for the data, correlated with the performance specification, ~~in a test system~~;

~~carrying out the working practice~~;

reading, via the test system, the data ~~out from~~ stored in the data-processing device; and

evaluating, via the test system, the data with the aid of the test criteria and determining a the degree of compliance with the performance specification.

2. (Previously Presented) The method as claimed in claim 1, wherein:  
clinical data are collected as the medical working practice, the collection process being assigned a collection protocol as the performance specification.

3. (Previously Presented) The method as claimed in claim 2, wherein:  
a measurement value for a clinical study is collected from a patient as the medical working practice, and  
the test system sends the measurement value as a valid measurement value to a study database if the collection protocol is complied with.

4. (Previously Presented) The method as claimed in claim 1, wherein:  
a knowledge-based system is used as the test system, and  
the performance specification is stored in the form of a rule set in the knowledge-based system.

5. (Original) The method as claimed in claim 4, wherein the performance specification is stored as a module in the rule set.
6. (Previously Presented) The method as claimed in claim 1, wherein the method is carried out automatically after each medical working practice.
7. (Currently Amended) The method as claimed in claim 1, wherein:  
if the performance specification is not complied with, a decision is made as to whether it is possible to repeat the working practice and, if so, repetition is requested;  
and  
if repetition is possible, a corresponding repetition request is made ~~to those carrying it out~~.
8. (Previously Presented) The method as claimed in claim 2, wherein:  
a knowledge-based system is used as the test system, and  
the performance specification is stored in the form of a rule set in the knowledge-based system.
9. (Previously Presented) The method as claimed in claim 3, wherein:  
a knowledge-based system is used as the test system, and  
the performance specification is stored in the form of a rule set in the knowledge-based system.
10. (Previously Presented) The method as claimed in claim 8, wherein the performance specification is stored as a module in the rule set.
11. (Previously Presented) The method as claimed in claim 9, wherein the performance specification is stored as a module in the rule set.
12. (Previously Presented) The method as claimed in claim 2, wherein the method is carried out automatically after each medical working practice.
13. (Previously Presented) The method as claimed in claim 3, wherein the method is carried out automatically after each medical working practice.

14. (Previously Presented) The method as claimed in claim 4, wherein the method is carried out automatically after each medical working practice.

15. (Previously Presented) The method as claimed in claim 5, wherein the method is carried out automatically after each medical working practice.

16. (Currently Amended) The method as claimed in claim 2, wherein:  
if the performance specification is not complied with, a decision is made as to whether it is possible to repeat the working practice and, if so, repetition is requested;  
and  
if repetition is possible, a corresponding repetition request is made ~~to those~~  
~~carrying it out.~~

17. (Currently Amended) The method as claimed in claim 3, wherein:  
if the performance specification is not complied with, a decision is made as to whether it is possible to repeat the working practice and, if so, repetition is requested;  
and  
if repetition is possible, a corresponding repetition request is made ~~to those~~  
~~carrying it out.~~

18. (Currently Amended) The method as claimed in claim 4, wherein:  
if the performance specification is not complied with, a decision is made as to whether it is possible to repeat the working practice and, if so, repetition is requested;  
and  
if repetition is possible, a corresponding repetition request is made ~~to those~~  
~~carrying it out.~~

19. (Currently Amended) The method as claimed in claim 5, wherein:  
if the performance specification is not complied with, a decision is made as to whether it is possible to repeat the working practice and, if so, repetition is requested;  
and  
if repetition is possible, a corresponding repetition request is made ~~to those~~  
~~carrying it out.~~

20. (Currently Amended) The method as claimed in claim 6, wherein:
- if the performance specification is not complied with, a decision is made as to whether it is possible to repeat the working practice and, if so, repetition is requested; and
- if repetition is possible, a corresponding repetition request is made to those carrying it out.
